IGCSE Geography – Plotting the Global Locations of Megacities

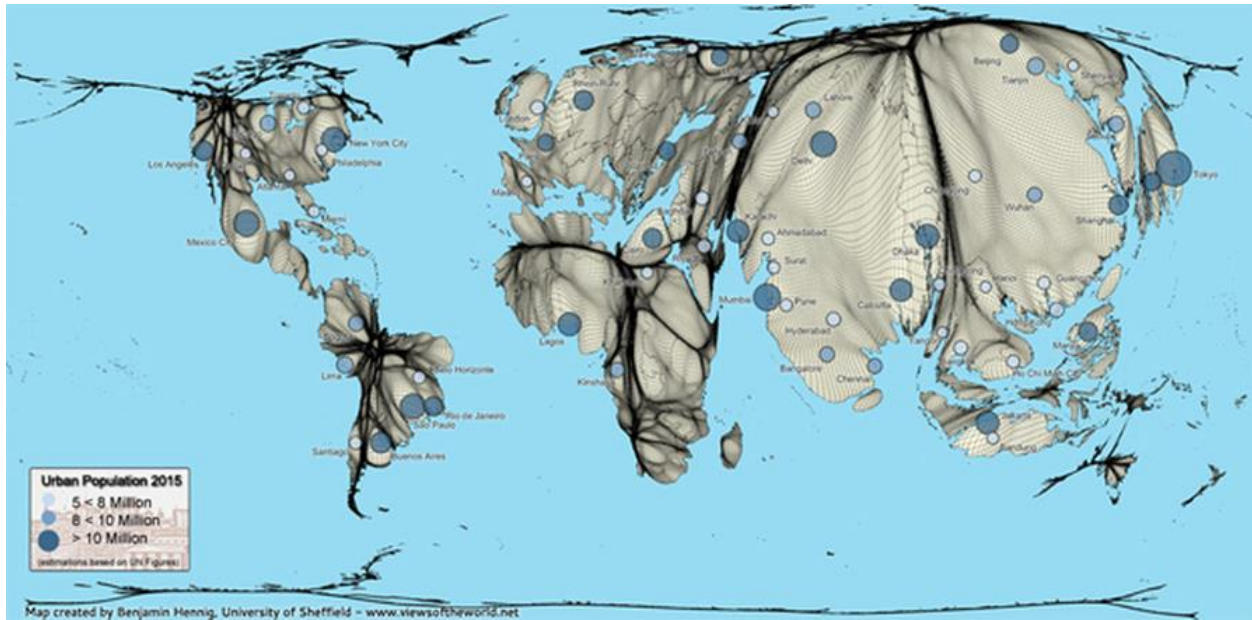

How many people must live in a city for it to be considered a mega city?

Study the map of the World above. Using a green pencil, annotate on the equator line. Now write below some analysis of the spatial distribution of megacities around the World.

Now watch the first video on YouTube and make notes on the current and future patterns and trends in mega cities in the space below.

Name here

A swelling in a country away from the mega cities indicates that many people live in rural (countryside) areas. Can you name three countries where this is the case?

- 1
- 2
- 3

A squeezed country with mega cities indicated would suggest that few people live in rural areas and most would live in the urban areas (towns & cities). Again, can you name three countries where this happens?

- 1
- 2
- 3
